

Creating Custom Project Templates in Xcode 4

Abizer Nasir

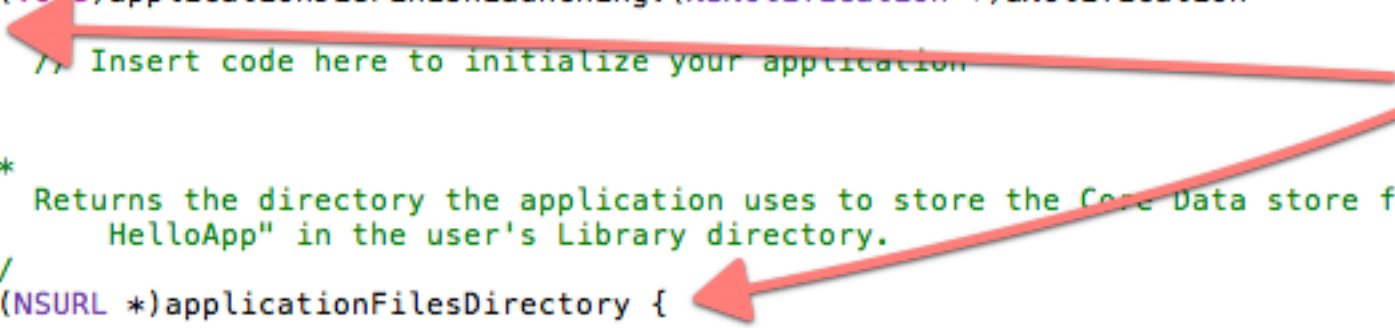

Overview

- ✦ Not a complete how-to. Sorry.
- ✦ The Xcode 4 template system is not-documented so I'm going to share the results of my trials and errors.
- ✦ There are plenty of examples in the existing templates.

Why Custom Templates?

- ✦ Apply a set of personal build settings.
- ✦ Conformance to code layout and code standards.
- ✦ Custom project types - such as plugins.
- ✦ One less point of friction.

```
15 - (void)applicationDidFinishLaunching:(NSNotification *)aNotification
16 {
17     // Insert code here to initialize your application
18 }
19
20 /**
21  Returns the directory the application uses to store the Core Data store file. This code uses a directory named "
22  HelloApp" in the user's Library directory.
23  */
24 - (NSURL *)applicationFilesDirectory {
25     NSFileManager *fileManager = [NSFileManager defaultManager];
26     NSURL *libraryURL = [[fileManager URLsForDirectory:NSLibraryDirectory inDomains:NSUserDomainMask] lastObject];
27     return [libraryURL URLByAppendingPathComponent:@"HelloApp"];
28 }
29
```

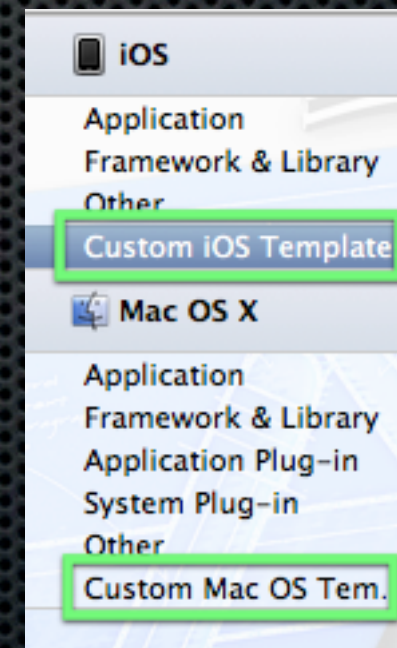

Seriously?!

Standard Locations

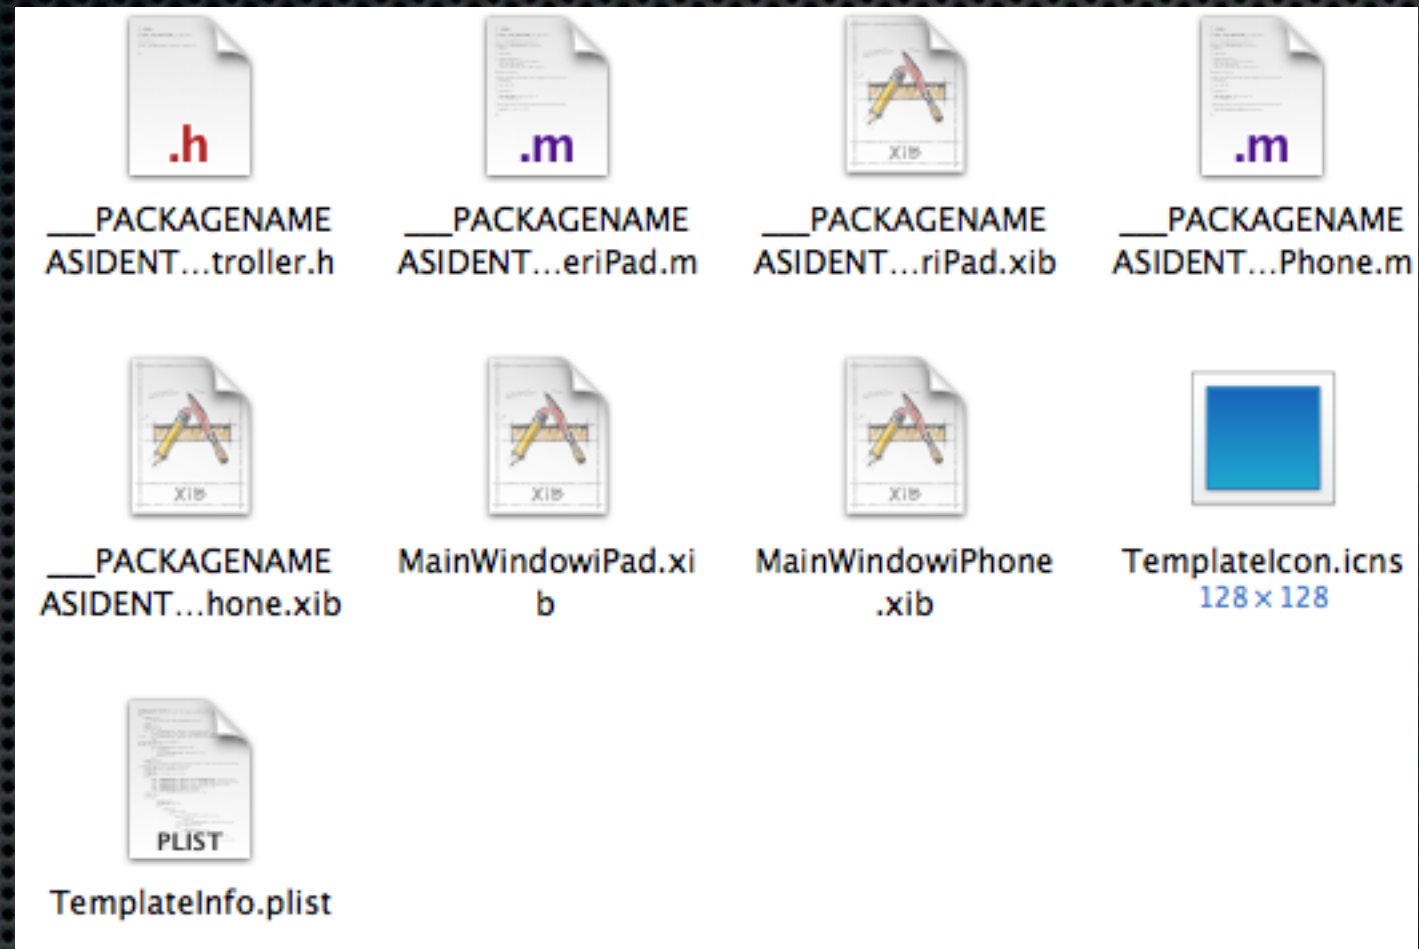

- ✧ Mac OS
 - ✧ /Developer/Library/Xcode/Templates/Project Templates/
- ✧ iOS
 - ✧ /Developer/Platforms/iPhoneOS.platform/Developer/Library/Xcode/Templates/Project Templates/
 - ✧ **Not** .../Xcode/Project Templates/

Custom Locations

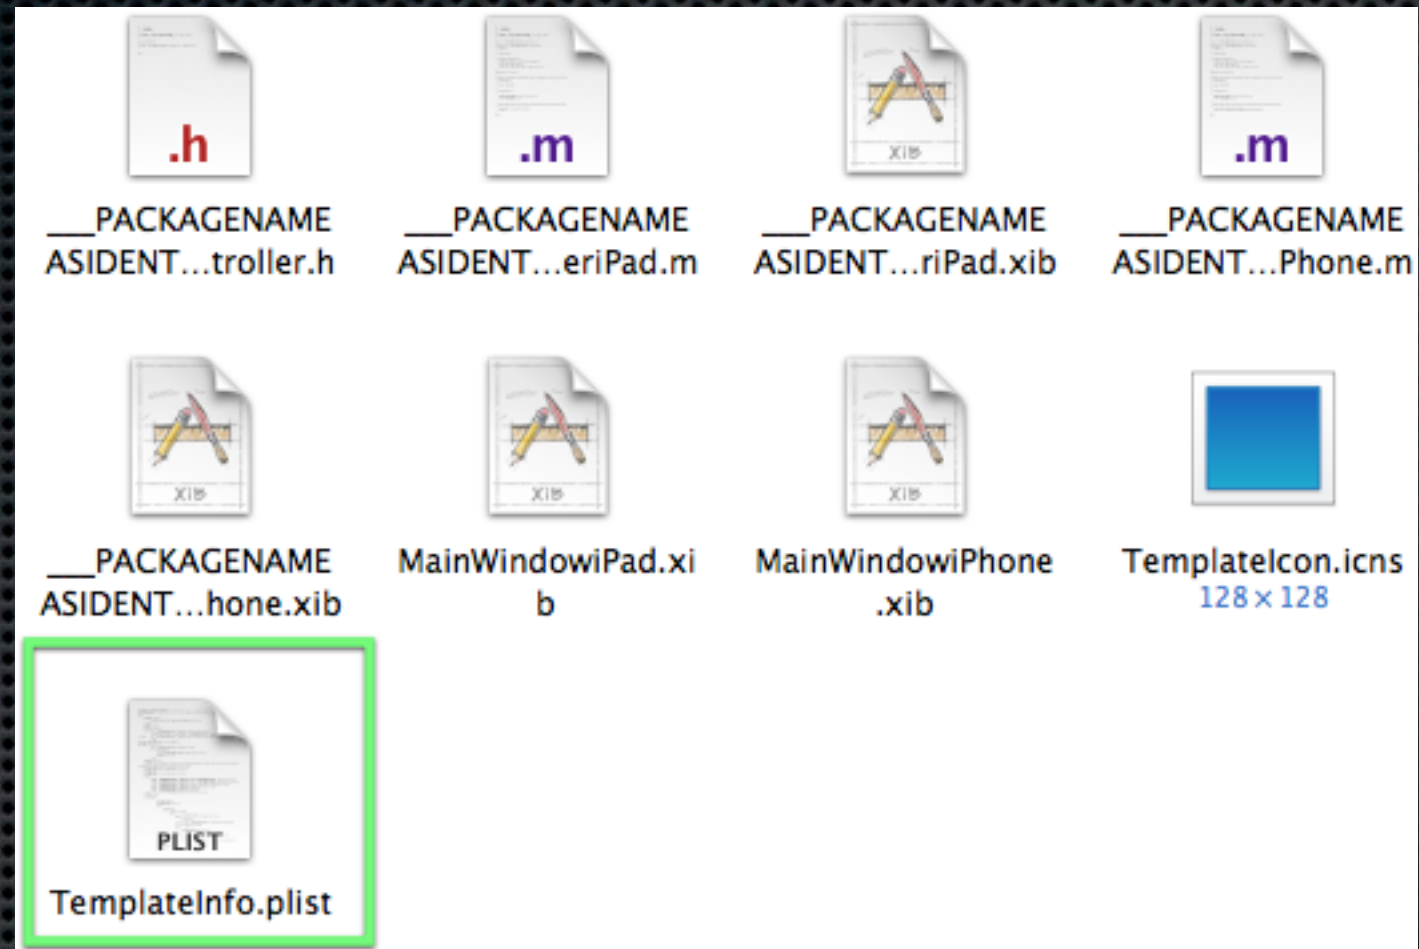

- ✦ ~/Library/Developer/Xcode/Templates/<group name>
- ✦ Remember to change the Identifier or it won't show up.
- ✦ Make sure that Concrete = YES, or it won't show up

Layout

Layout

Important Keys

Key	Note
Concrete	Visible in window
Identifier	Reverse domain based unique identifier
Ancestors	Inheritance (multiple allowed)
Description	The text displayed in window
Kind	Project or File
Definitions	Text to go in source files
Nodes	Creates files described by Definitions
Options	Extra choices
Platforms	Platform (duh!)
Projects	Build settings
Targets	Build settings/phases. Linked libraries

Choose a template for your new project:

 iOS

Application

Framework & Library

Other

Custom iOS Templates

 Mac OS X

Application

Framework & Library

Application Plug-in

System Plug-in

Other

Custom Mac OS Tem...

Navigation-based
Application

OpenGL ES
Application

Split View-based
Application

Tab Bar Application

Utility Application

View-based
Application

Window-based
Application

Navigation-based Application

This template provides a starting point for an application that uses a navigation controller. It provides a user interface configured with a navigation controller to display a list of items.

Cancel

Previous

Next

Choose options for your new project:

Product Name

Company Identifier

org.abizern

Bundle Identifier

org.abizern.ProductName

☒ Use Core Data

☐ Include Unit Tests

Cancel

Previous

Next

Definitions

- ✦ Text snippets.
- ✦ Specific code sections (may be bracketed by 'Begining' and 'End').
- ✦ Names of files to create and their locations.

Nodes

- ✦ Creates files for the project
- ✦ Specify what code sections or snippets goes into those files
- ✦ Specify the location of the files e.g. en.lproj for xibs

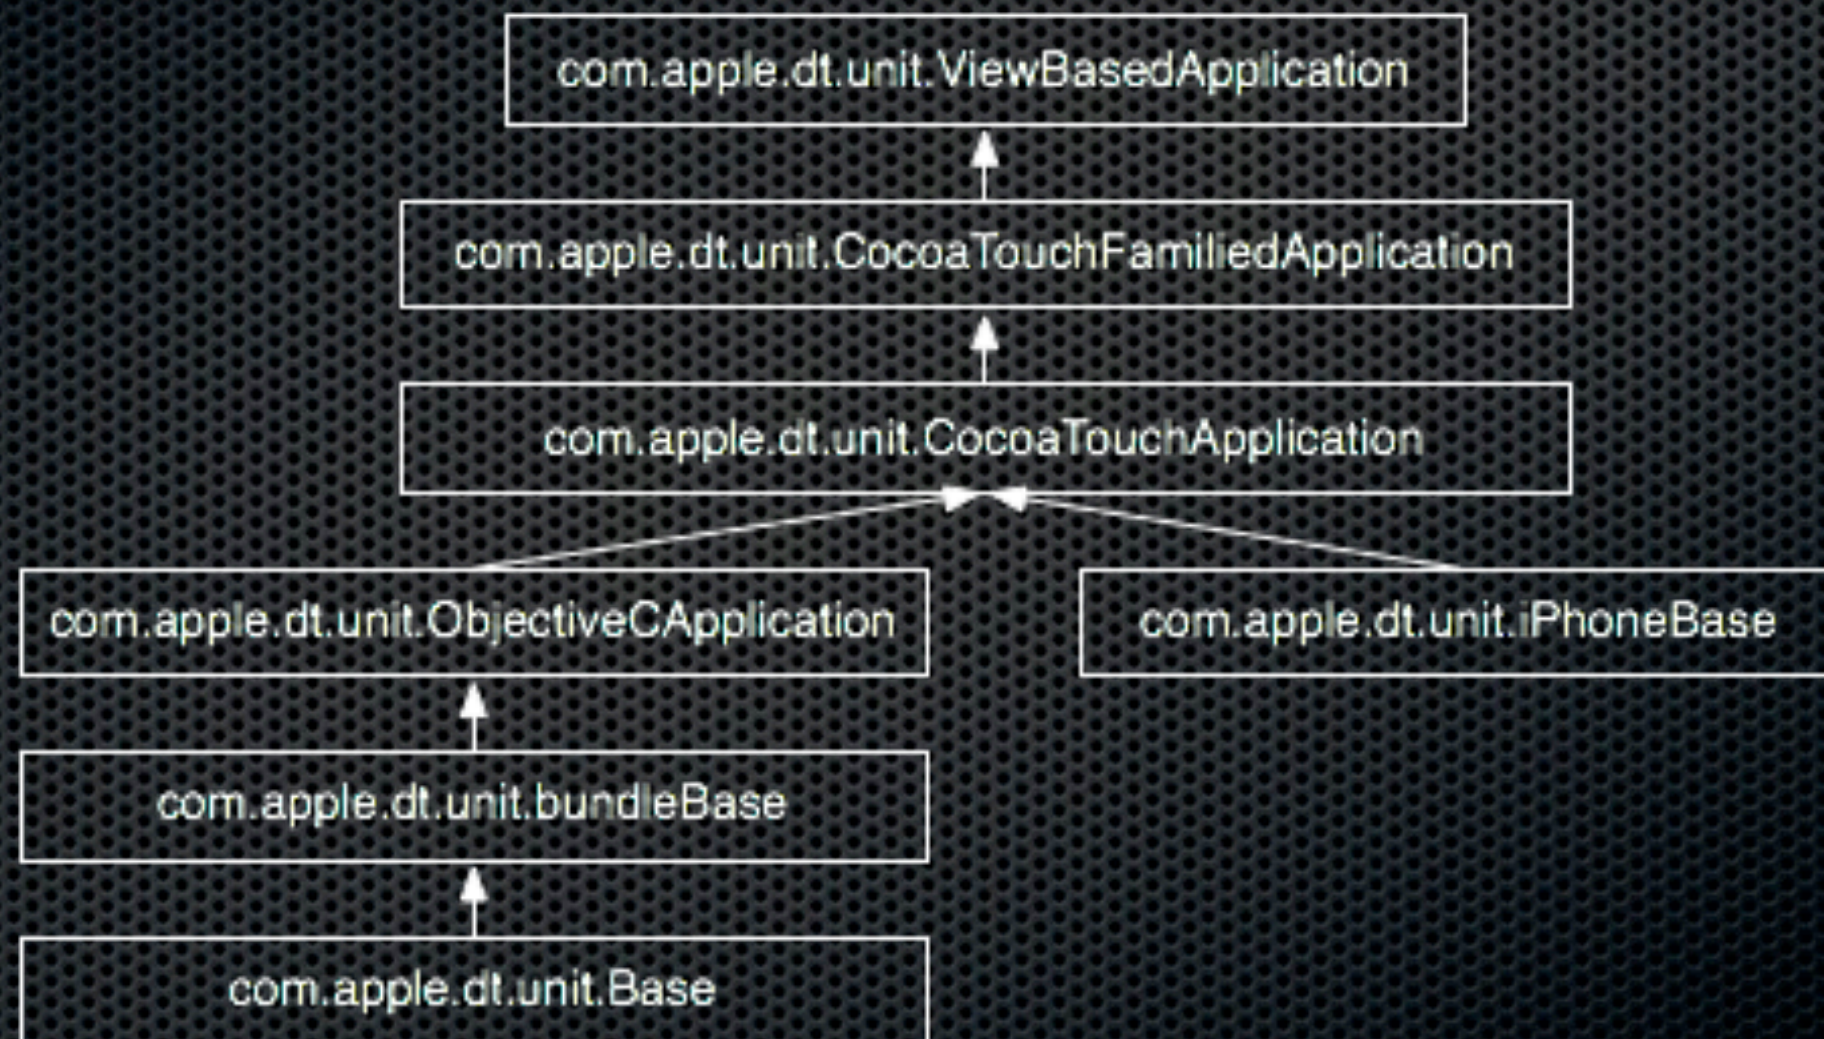

Options

- ✦ Allows options to be presented
 - ✦ NotPersisted <true/>
- ✦ Changes to Definitions and Nodes can be made based on these options

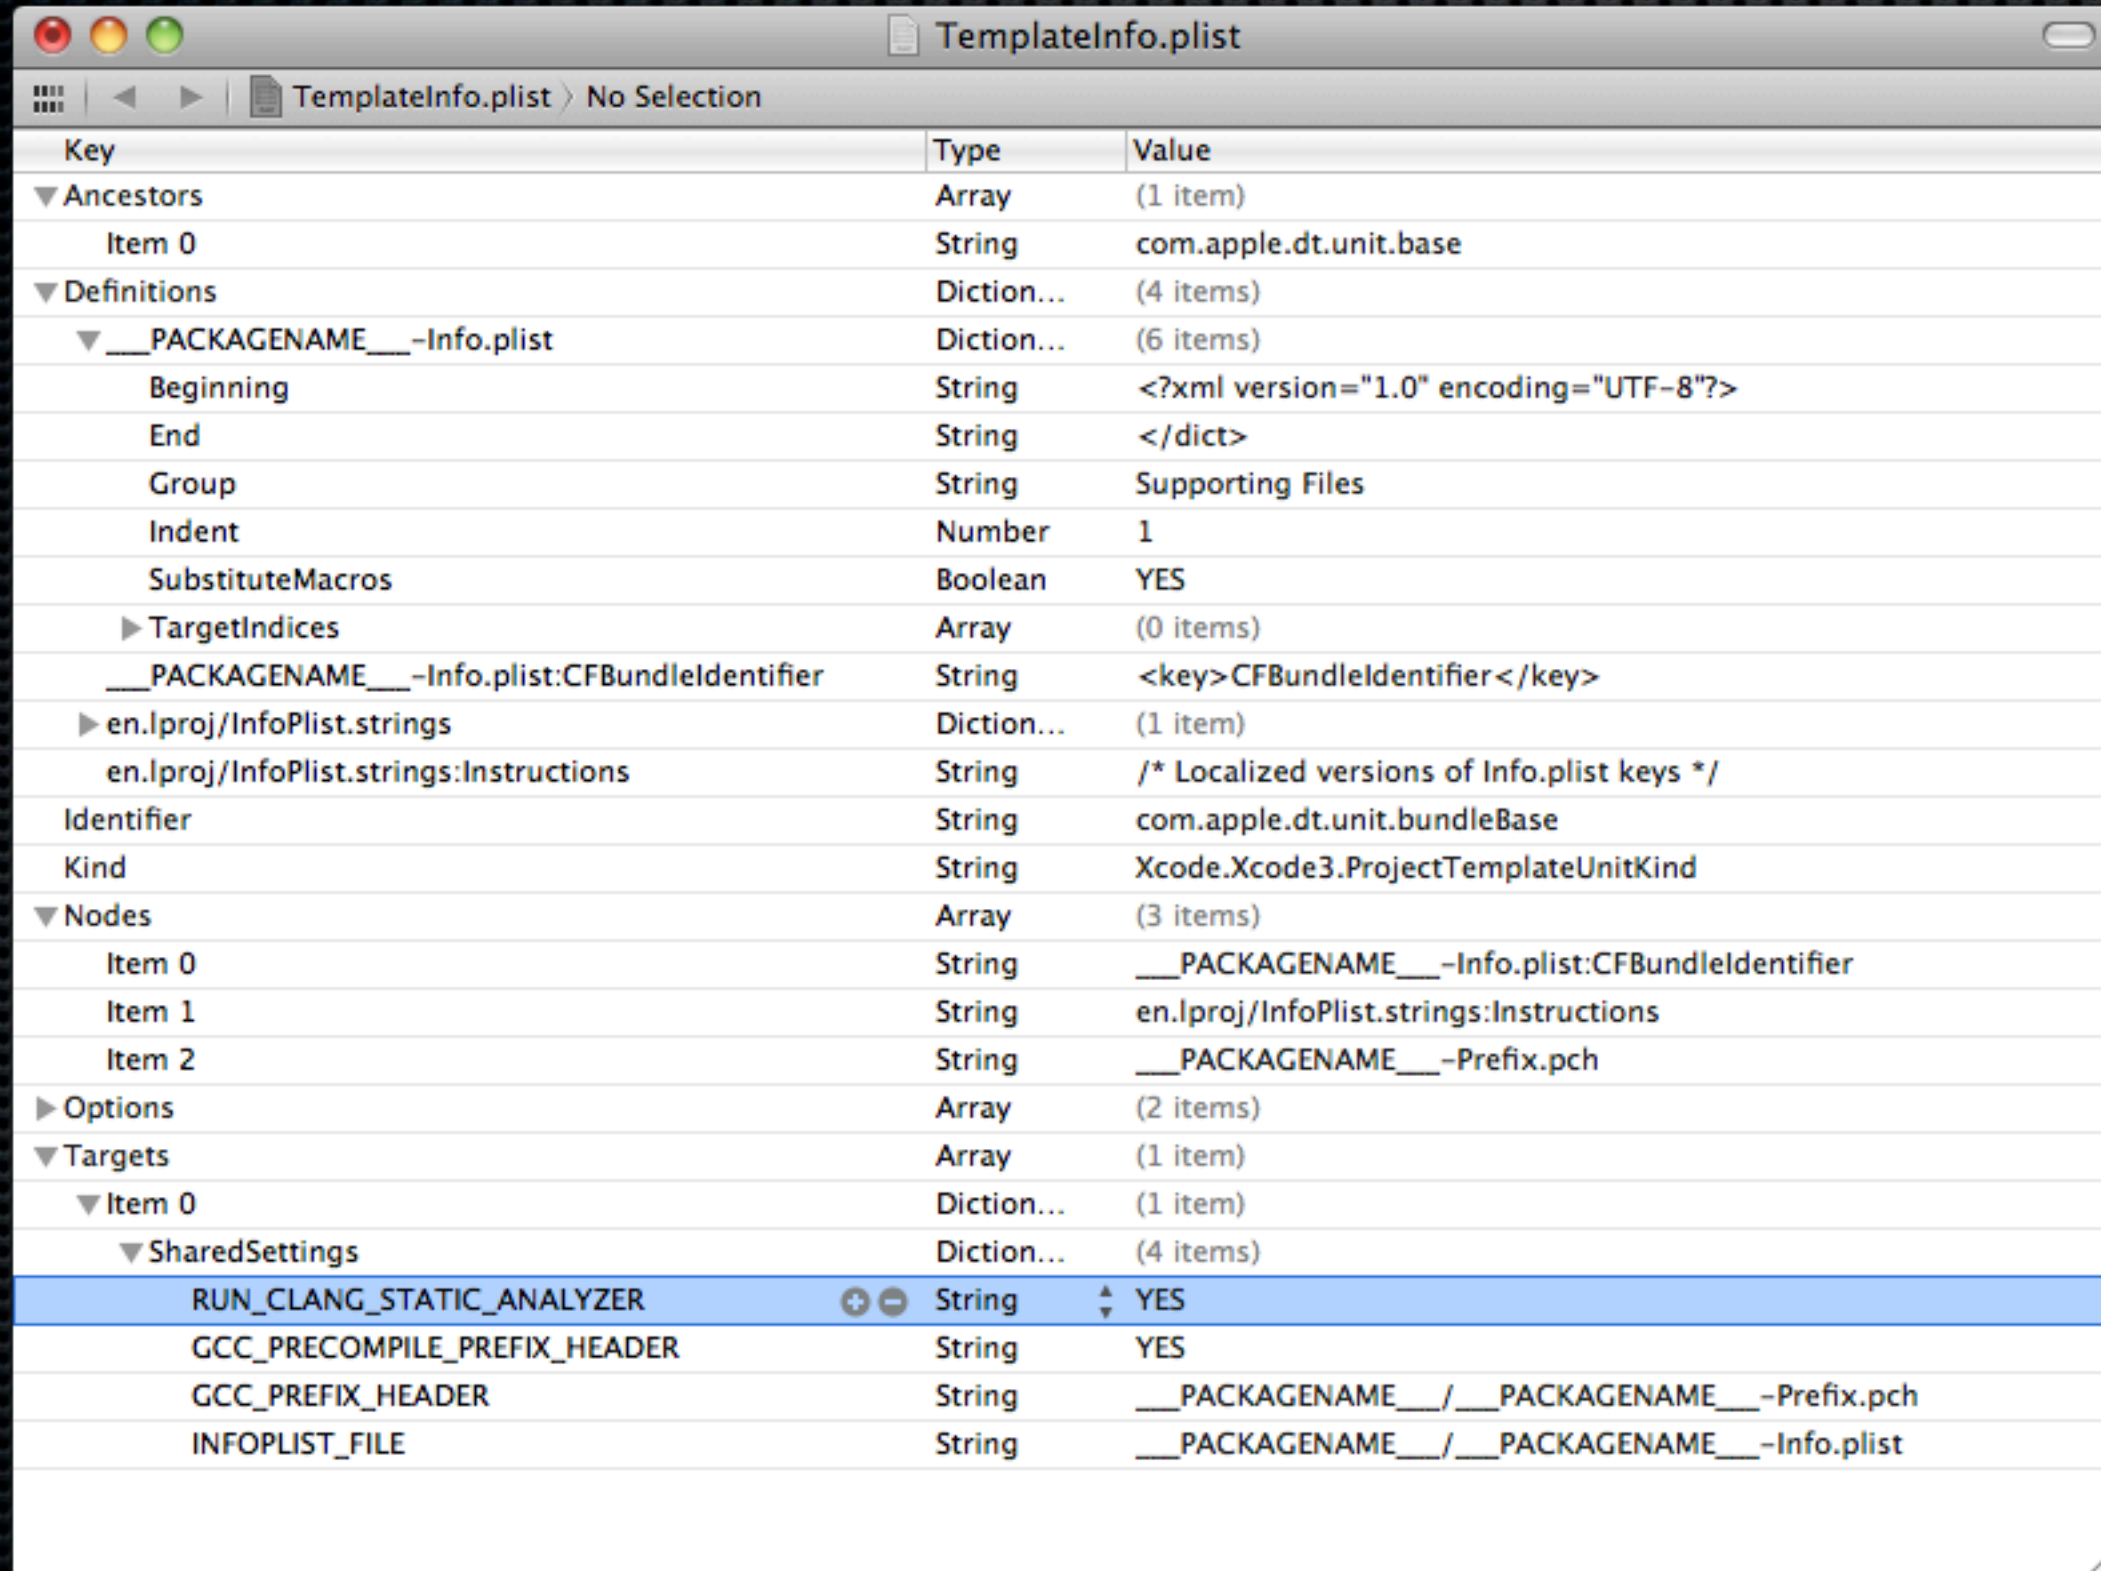

Example

- ✦ iOS View based project
- ✦ Create it to follow my own preferences
 - ✦ Run Static Analyser
 - ✦ Custom pch macros
 - ✦ Opening braces on the same line

Template Hierarchy

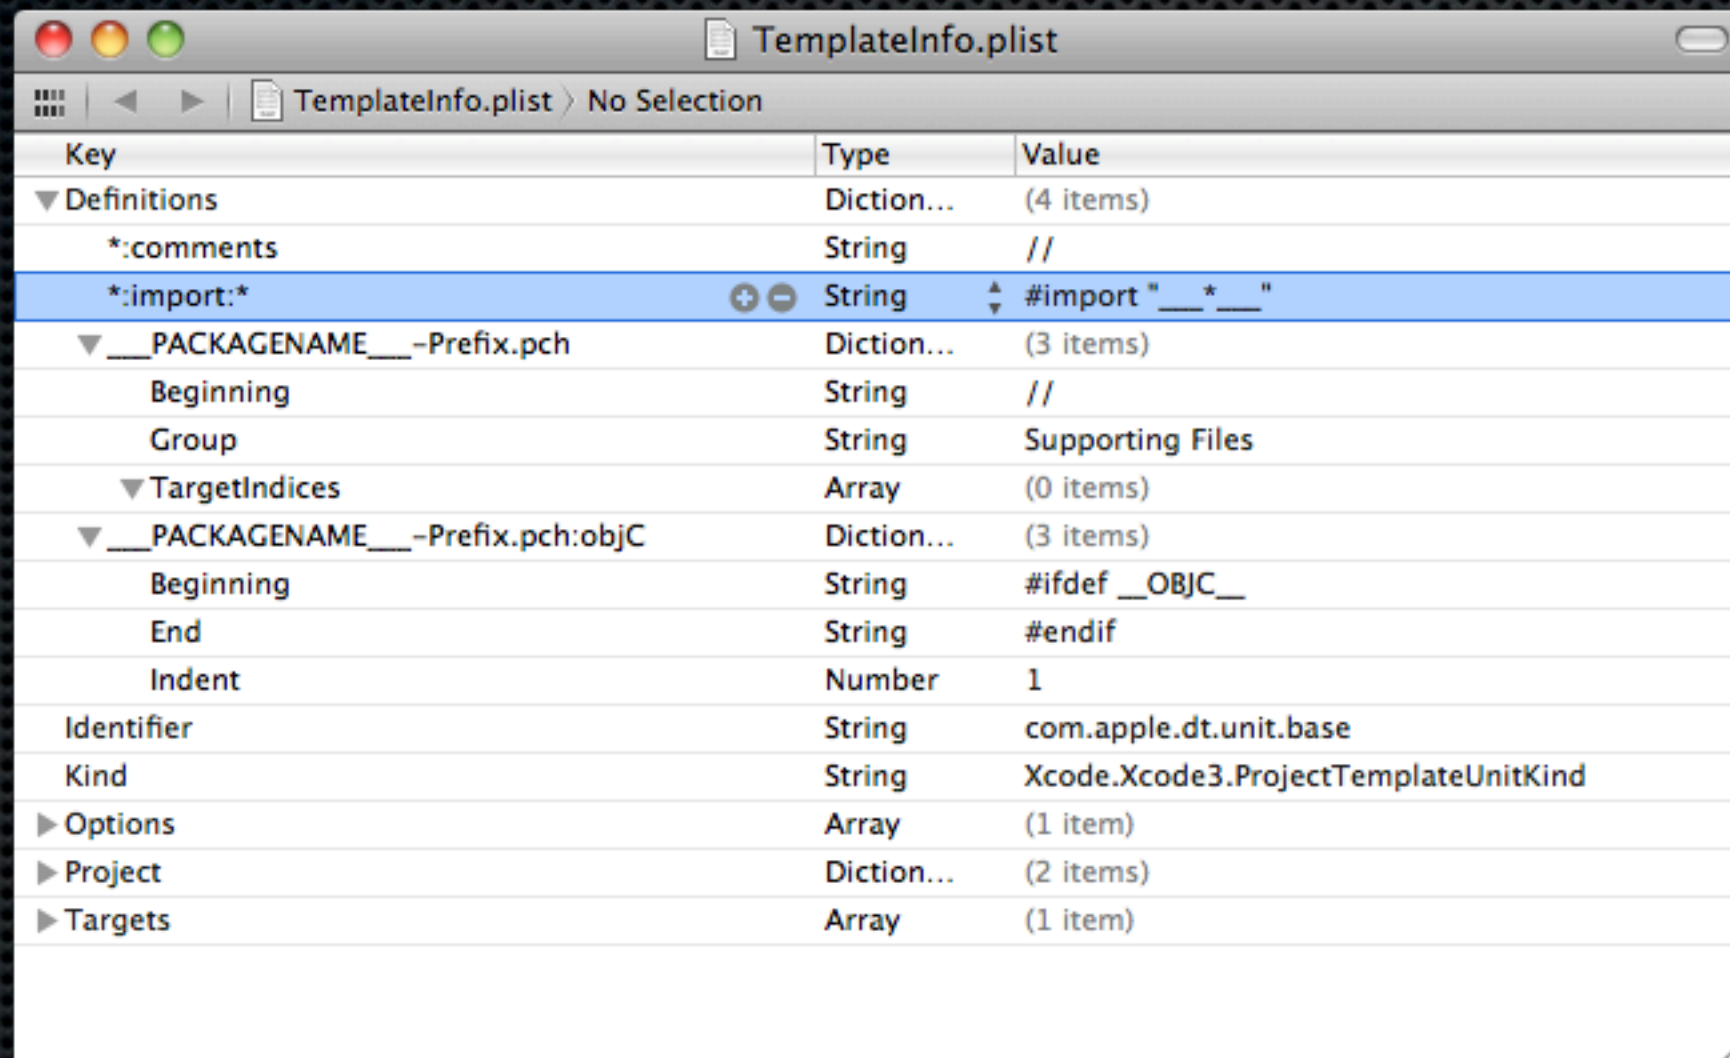

com...unit.bundleBase

Key	Type	Value
▼ Ancestors	Array	(1 item)
Item 0	String	com.apple.dt.unit.base
▼ Definitions	Diction...	(4 items)
▼ __PACKAGENAME__-Info.plist	Diction...	(6 items)
Beginning	String	<?xml version="1.0" encoding="UTF-8"?>
End	String	</dict>
Group	String	Supporting Files
Indent	Number	1
SubstituteMacros	Boolean	YES
► TargetIndices	Array	(0 items)
__PACKAGENAME__-Info.plist:CFBundleIdentifier	String	<key>CFBundleIdentifier</key>
► en.lproj/InfoPlist.strings	Diction...	(1 item)
en.lproj/InfoPlist.strings:Instructions	String	/* Localized versions of Info.plist keys */
Identifier	String	com.apple.dt.unit.bundleBase
Kind	String	Xcode.Xcode3.ProjectTemplateUnitKind
▼ Nodes	Array	(3 items)
Item 0	String	__PACKAGENAME__-Info.plist:CFBundleIdentifier
Item 1	String	en.lproj/InfoPlist.strings:Instructions
Item 2	String	__PACKAGENAME__-Prefix.pch
► Options	Array	(2 items)
▼ Targets	Array	(1 item)
▼ Item 0	Diction...	(1 item)
▼ SharedSettings	Diction...	(4 items)
RUN_CLANG_STATIC_ANALYZER	String	YES
GCC_PRECOMPILE_PREFIX_HEADER	String	YES
GCC_PREFIX_HEADER	String	__PACKAGENAME__/__PACKAGENAME__-Prefix.pch
INFOPLIST_FILE	String	__PACKAGENAME__/__PACKAGENAME__-Info.plist

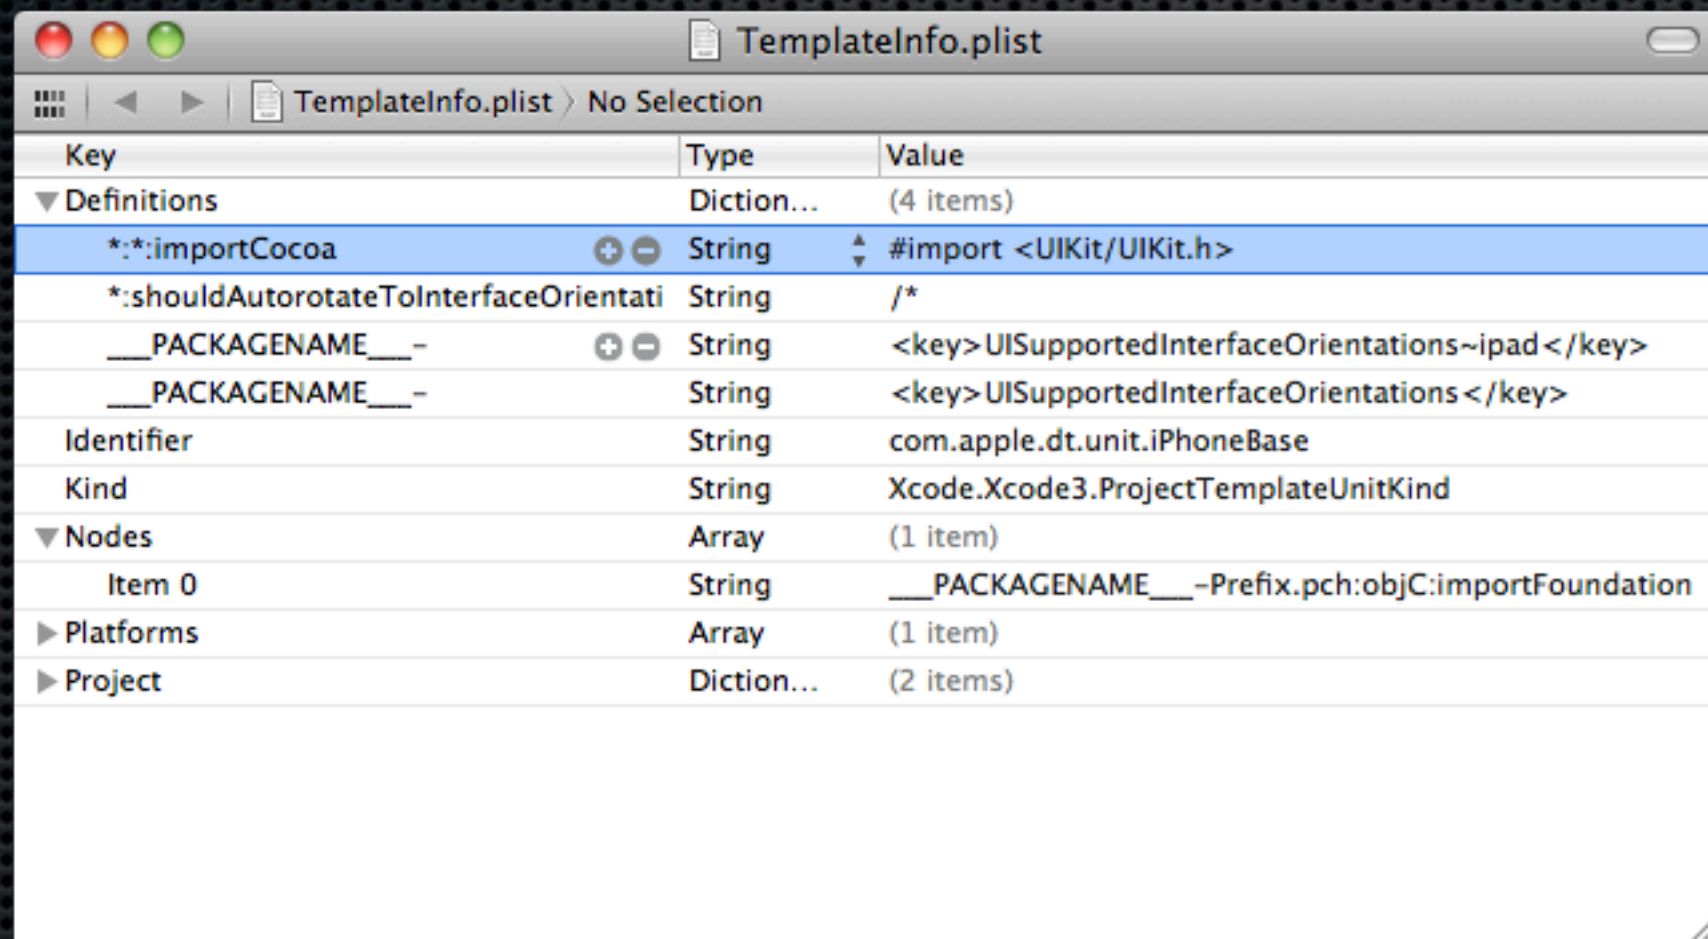

com.apple.dt.unit.Base

The screenshot shows the Xcode TemplateInfo.plist editor window. The title bar reads "TemplateInfo.plist". The breadcrumb navigation shows "TemplateInfo.plist > No Selection". The main content is a table with three columns: "Key", "Type", and "Value". The table lists various keys for the template, including definitions, package names, target indices, and project information. The key "*:import:*" is currently selected, highlighted in blue.

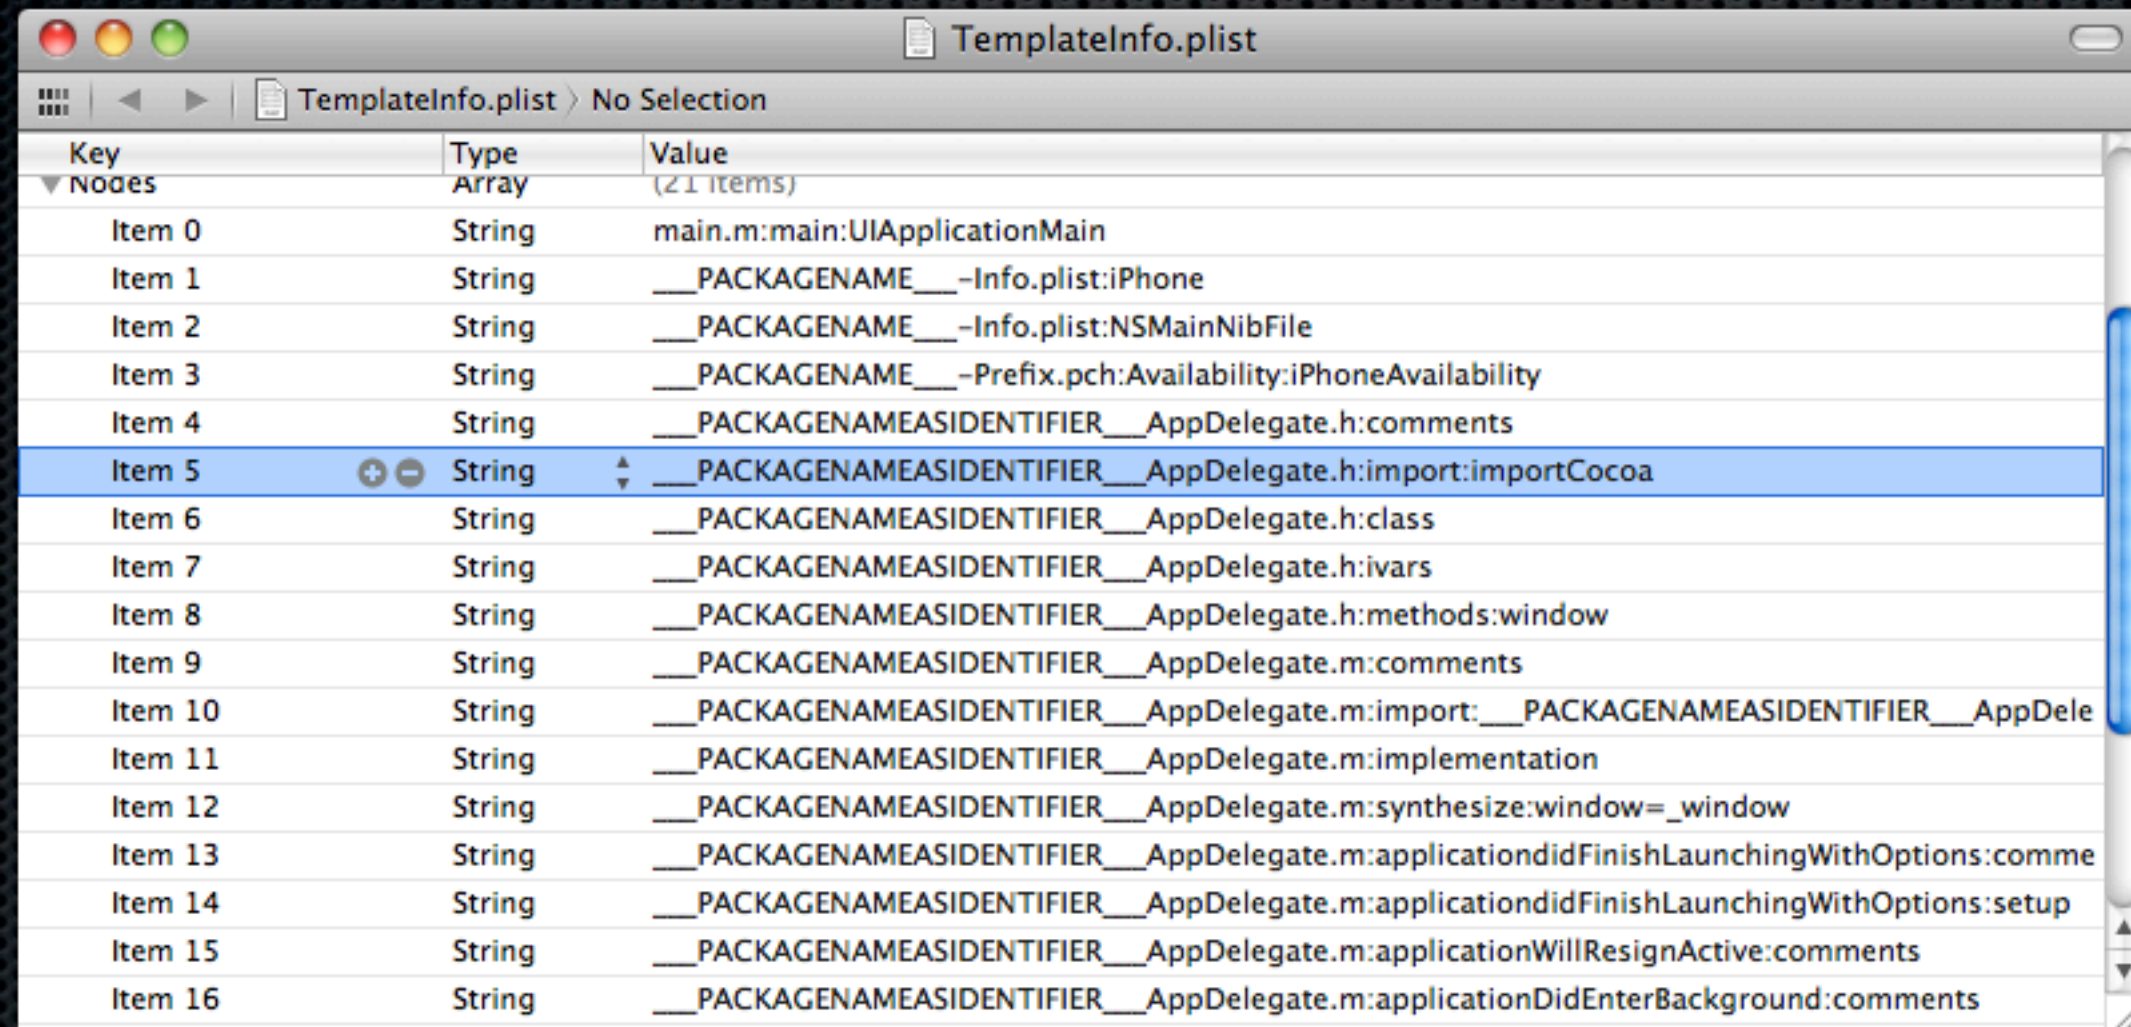

Key	Type	Value
▼ Definitions	Diction...	(4 items)
*:comments	String	//
:import:	String	#import "___*___"
▼ __PACKAGE_NAME__-Prefix.pch	Diction...	(3 items)
Beginning	String	//
Group	String	Supporting Files
▼ TargetIndices	Array	(0 items)
▼ __PACKAGE_NAME__-Prefix.pch:objc	Diction...	(3 items)
Beginning	String	#ifdef __OBJC__
End	String	#endif
Indent	Number	1
Identifier	String	com.apple.dt.unit.base
Kind	String	Xcode.Xcode3.ProjectTemplateUnitKind
► Options	Array	(1 item)
► Project	Diction...	(2 items)
► Targets	Array	(1 item)

com...unit.iPhoneBase

Key	Type	Value
▼ Definitions	Diction...	(4 items)
*:importCocoa	String	#import <UIKit/UIKit.h>
:shouldAutorotateToInterfaceOrientation	String	/
__PACKAGE_NAME__~	String	<key>UISupportedInterfaceOrientations~ipad</key>
__PACKAGE_NAME__~	String	<key>UISupportedInterfaceOrientations</key>
Identifier	String	com.apple.dt.unit.iPhoneBase
Kind	String	Xcode.Xcode3.ProjectTemplateUnitKind
▼ Nodes	Array	(1 item)
Item 0	String	__PACKAGE_NAME__~Prefix.pch:objc:importFoundation
▶ Platforms	Array	(1 item)
▶ Project	Diction...	(2 items)

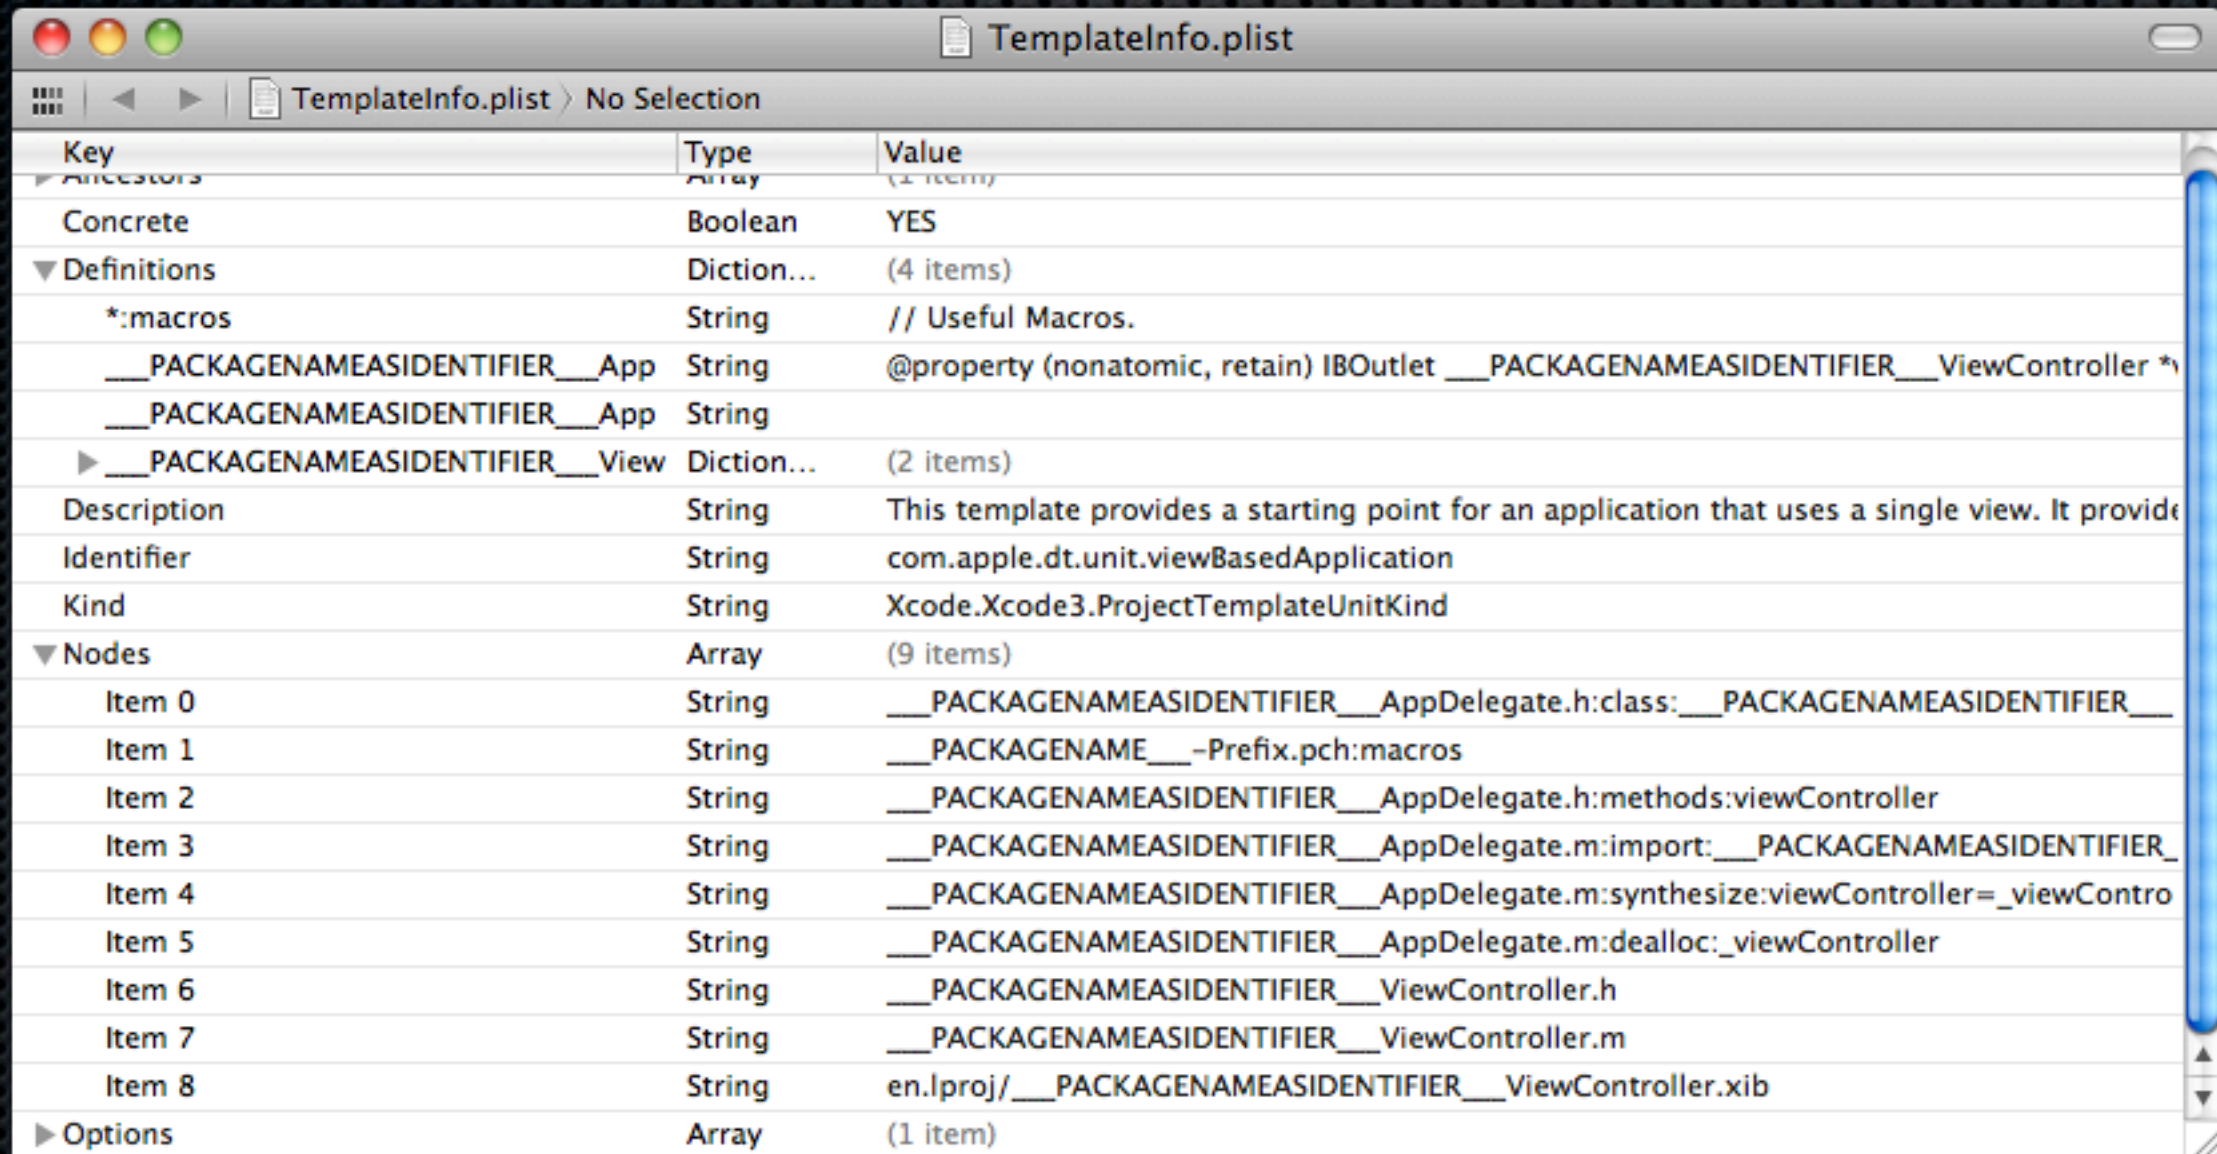

...CocoaTouchApplication

TemplateInfo.plist

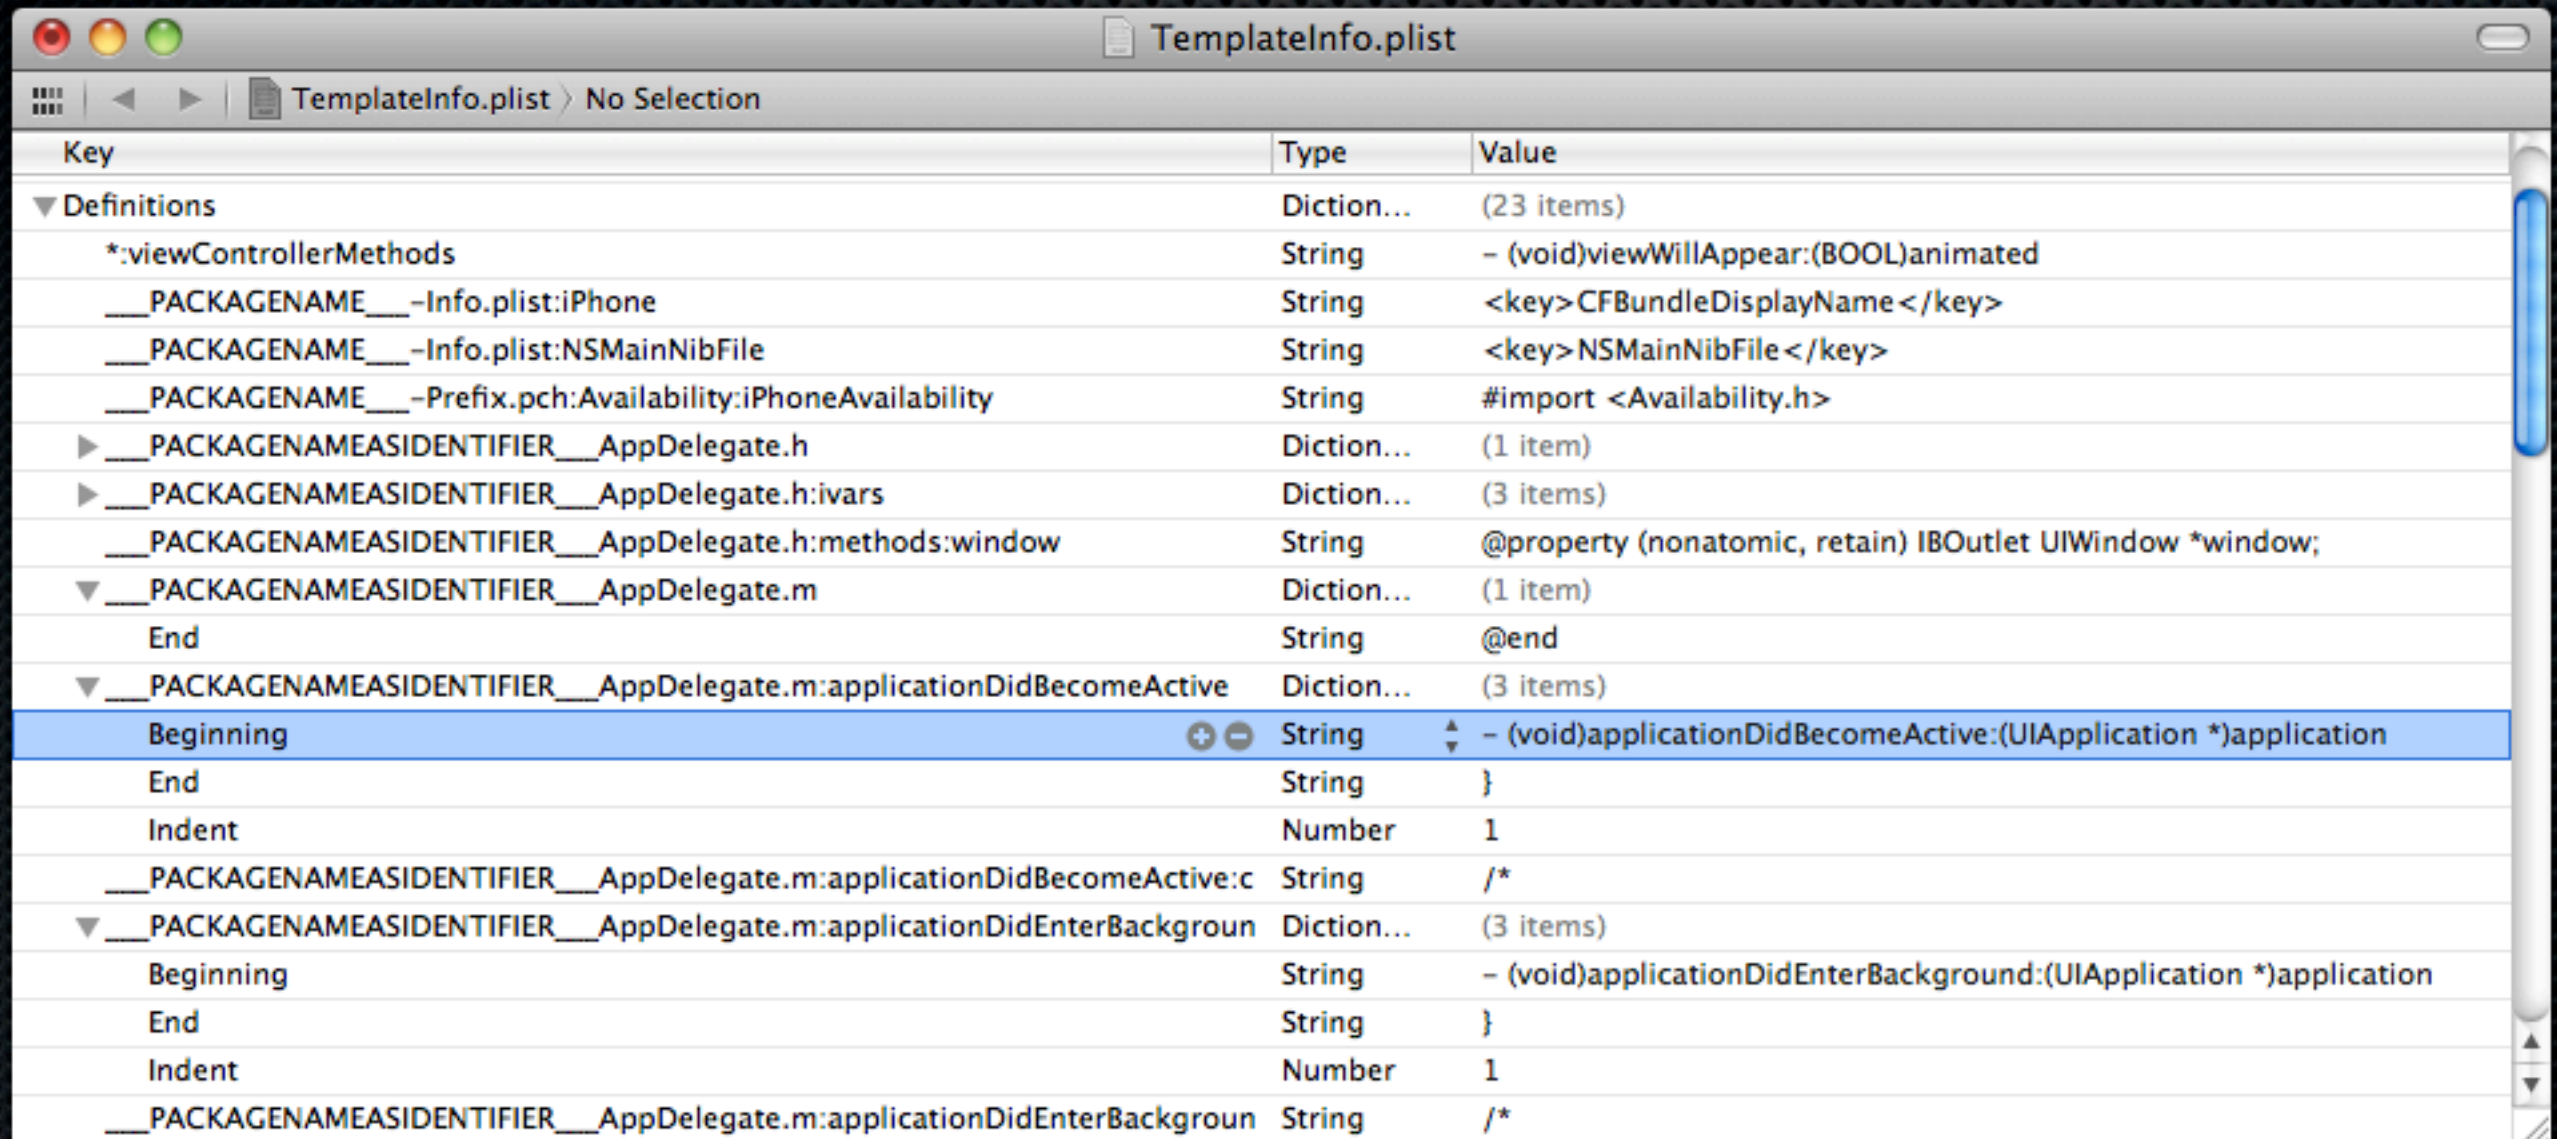

Key	Type	Value
Nodes	Array	(21 items)
Item 0	String	main.m:main:UIApplicationMain
Item 1	String	__PACKAGE_NAME__-Info.plist:iPhone
Item 2	String	__PACKAGE_NAME__-Info.plist:NSMainNibFile
Item 3	String	__PACKAGE_NAME__-Prefix.pch:Availability:iPhoneAvailability
Item 4	String	__PACKAGE_NAME_AS_IDENTIFIER__AppDelegate.h:comments
Item 5	String	__PACKAGE_NAME_AS_IDENTIFIER__AppDelegate.h:import:importCocoa
Item 6	String	__PACKAGE_NAME_AS_IDENTIFIER__AppDelegate.h:class
Item 7	String	__PACKAGE_NAME_AS_IDENTIFIER__AppDelegate.h:ivars
Item 8	String	__PACKAGE_NAME_AS_IDENTIFIER__AppDelegate.h:methods>window
Item 9	String	__PACKAGE_NAME_AS_IDENTIFIER__AppDelegate.m:comments
Item 10	String	__PACKAGE_NAME_AS_IDENTIFIER__AppDelegate.m:import:__PACKAGE_NAME_AS_IDENTIFIER__AppDele
Item 11	String	__PACKAGE_NAME_AS_IDENTIFIER__AppDelegate.m:implementation
Item 12	String	__PACKAGE_NAME_AS_IDENTIFIER__AppDelegate.m:synthesize>window=_window
Item 13	String	__PACKAGE_NAME_AS_IDENTIFIER__AppDelegate.m:applicationDidFinishLaunchingWithOptions:comme
Item 14	String	__PACKAGE_NAME_AS_IDENTIFIER__AppDelegate.m:applicationDidFinishLaunchingWithOptions:setup
Item 15	String	__PACKAGE_NAME_AS_IDENTIFIER__AppDelegate.m:applicationWillResignActive:comments
Item 16	String	__PACKAGE_NAME_AS_IDENTIFIER__AppDelegate.m:applicationDidEnterBackground:comments

...ViewBasedApplication

Key	Type	Value
▼ Ancestors	Array	(1 item)
Concrete	Boolean	YES
▼ Definitions	Diction...	(4 items)
*:macros	String	// Useful Macros.
__PACKAGE_NAME_AS_IDENTIFIER__App	String	@property (nonatomic, retain) IBOutlet __PACKAGE_NAME_AS_IDENTIFIER__ViewController *
__PACKAGE_NAME_AS_IDENTIFIER__App	String	
▶ __PACKAGE_NAME_AS_IDENTIFIER__View	Diction...	(2 items)
Description	String	This template provides a starting point for an application that uses a single view. It provide
Identifier	String	com.apple.dt.unit.viewBasedApplication
Kind	String	Xcode.Xcode3.ProjectTemplateUnitKind
▼ Nodes	Array	(9 items)
Item 0	String	__PACKAGE_NAME_AS_IDENTIFIER__AppDelegate.h:class: __PACKAGE_NAME_AS_IDENTIFIER__
Item 1	String	__PACKAGE_NAME__-Prefix.pch:macros
Item 2	String	__PACKAGE_NAME_AS_IDENTIFIER__AppDelegate.h:methods:viewController
Item 3	String	__PACKAGE_NAME_AS_IDENTIFIER__AppDelegate.m:import: __PACKAGE_NAME_AS_IDENTIFIER__
Item 4	String	__PACKAGE_NAME_AS_IDENTIFIER__AppDelegate.m:synthesize:viewController=_viewContro
Item 5	String	__PACKAGE_NAME_AS_IDENTIFIER__AppDelegate.m:dealloc:_viewController
Item 6	String	__PACKAGE_NAME_AS_IDENTIFIER__ViewController.h
Item 7	String	__PACKAGE_NAME_AS_IDENTIFIER__ViewController.m
Item 8	String	en.lproj/__PACKAGE_NAME_AS_IDENTIFIER__ViewController.xib
▶ Options	Array	(1 item)

...CocoaTouchApplication

Key	Type	Value

▼ __PACKAGE_NAMEASIDENTIFIER__AppDelegate.m:applicationDidEnterBackground	Diction...	(3 items)
Beginning	String	– (void)applicationDidEnterBackground:(UIApplication *)application
End	String	}
Indent	Number	1
__PACKAGE_NAMEASIDENTIFIER__AppDelegate.m:applicationDidEnterBackground	String	/*

There is an easier way

- ✦ create your own abstract base class for common options
 - ✦ Static Analyser
- ✦ Create a subclass of a template and customise everything at a higher level
 - ✦ Less re-use but easier.

Other Examples

- ✦ <http://blog.boreal-kiss.net/2011/03/11/a-minimal-project-template-for-xcode-4/>
- ✦ https://github.com/cocos2d/cocos2d-iphone/tree/develop/templates/Xcode4_templates
- ✦ <https://github.com/Abizern/Sandbox-2-Plugin>
- ✦ Blog posts/resources to follow

Be Careful

- ✦ Back up your templates before you mess with them.
- ✦ Xcode starts up with the last template used, so if you have a corrupted plist it'll crash (not that it needs much of an excuse)
- ✦ Quicklook is a handy smoke test.
- ✦ We all know what “undocumented” means, don't we?
- ✦ Start small, but be brave.

Thank you!
